

Slice Configuration for GEC17 VNode Video-streaming Demo

- Create a VNode-ProtoGENI federated slice
- Extend the data plane from the ProtoGENI node to GEC17 demo site
- We hope to set VLAN capacity to 50Mbps, because we will demonstrate 25Mbps video-streaming.

Question:

- What kind of hardware_type do we have to allocate for ProtoGENI node (NS3)?
- How to specify the VLAN in slice design. Do we have to use 'Shared VLAN'?
- Is 50Mbps VLAN possible? (Otherwise we have to change the demo setting.)
