Substrate and user service tasks done

- Refactoring of Kansei web interface into Researcher Portal
- Genification of (most) Kansei user services as web services
 - e.g. implemented (some of the) experiment interaction interfaces as web services
- Genification of Kansei scheduler
- CM/AM aspects of Experiment & Slice Management planes

- Link quality measurement demo ready (shown at GEC4)
- Pursuer evader tracking demo ready (shown at GEC4)

Clearinghouse tasks done

- Deployed ORCA
- Developed SOAP, XML.RPC based interaction framework between clearinghouse and research portal/site authority
- “Hello, World!” Kansei demo, showing interaction between clearinghouse and researcher portal (shown at by GEC4)

Implementation Tools

- Researcher Portal: PHP
- Site Authority
 - Web services: EJB via JBoss server
 - AM, CM: Perl and C
 - Storage: MySQL
 - Substrates: TinyOS, Linux, (and Java, .NET, and Contiki)
- Clearinghouse: ORCA based
